

**AVKOPACK® 1502H****CHARACTERISTICS**

*Dry gland packing braided by silicate glass yarn with special silicate system. Diagonally braided packing on vanguard technology for static sealing, produced from silicate yarn with high frequency, covered with special system from silicate materials in base on MICA and Wollostonite. This combination increase service temperature to 800°C and temporary loading to 1000°C, limited packing stickiness to packing substract and improving hermetic capacity on AVKOPAK 1502H.*

**APPLICATION**

*AVKOPACK 1502H is used for static sealing and hermetisation of immovable joints of various machines and apparatus when a resistance to high temperature is required. The packing has excellent dielectric possibility. It is used for sealing air, inert gases, neutral steam, water steam, organic solvents and etc.*

**TECHNICAL PARAMETERS**

Working temperature:	+700 °C
pH:	5 – 11
Color:	white
Pressures:	For static sealing

**HEALTH HAZARD INFORMATION:** *No harmful effects ascertained.*
